Please indicate the names of all those attending (*for name tags*) & your
choice of entree (*prime rib, chicken or fish*).

PROGRAM OVERVIEW

Libby and Mark will regale us with some of the art and science behind the delicious empirical chemical process of breadmaking. Ever wondered the best way to reheat bread ... and why? What about the best way to store bread - this could be a trick question! As the owner and manager of the new Charleston Bread, LLC, in downtown Charleston, Libby knows a thing or two about this batch process.

THE SPEAKERS

Libby has a Masters in Biology from Marshall University, as well as her JD from the University of Oregon. She worked with the West Virginia Environmental Quality Board drafting water quality standards through 2004. Libby's picture was featured on page 1F of last Sunday's (December 31st) issue of the Charleston "*Sunday Gazette-Mail*". Mark is a professor of biology at the West Virginia State University. He is a plant physiologist who has studied plant anerobe waterbodies for decades. Mark has a Masters in Biology from Marshall University and earned his Ph.D. from Oregon State University.
